

BACKYARD COMPOSTING

Composting is a great way to reduce and reuse waste. This saves space in the landfill and helps to lessen the amount of methane gas in our atmosphere. Plus, use the soil created from your compost to grow more plants!

WHAT TO COMPOST...

Veggie scraps, fruit scraps, peels, tea bags, leftover sandwich scraps (without meat or dairy) tea bags, coffee grounds, dry food scraps, leftover muffins, cut flowers, leaves, and egg shells.

...WHAT NOT TO COMPOST

Meat scraps, dairy products (cheese, yogurt), bones, plastic of any kind, anything that is not an organic product, wrappers, oils, wood.

COMPOSTING TIP:

IF YOU WOULDN'T WANT TO GROW YOUR FOOD WITH IT, DON'T PUT IT IN THE COMPOST.
